Dear Jeremy,

In general I strongly support the development of UAV technology in the UK as part of a successful domestic defence and civilian aviation industry. UAVs are being used to good effect in Afghanistan to save lives and minimise risks both to our troops and the civilian population. I welcome the fact that the Welsh Assembly has been looking at expanding the testing area in West Wales although I recognise that there are important questions about noise and community safety that must be fully addressed.

Regards,

Stephen Crabb MP
